ASSOCIATE SOFTWARE ENGINEER

Results-driven BSc (Hons) Software Engineering graduate from the Sri Lanka Institute of Information Technology (SLIIT), with a strong passion for full-stack web and mobile development. Skilled in building and optimizing scalable applications using the MERN stack (MongoDB, Express.js, React, Node.js), and developing cross-platform mobile apps with React Native. Proficient in backend development and API integration using Python (Flask, FastAPI), with solid experience in database management (MySQL, MongoDB). A proactive team player with hands-on experience in agile environments, focused on delivering efficient, high-performance, and user-centric software solutions.

SKILLS

Technical : JavaScript, Java, C, C++, HTML, CSS, PHP, SQL, Kotlin, Python, React, React-Native, Node.js, Express, Redux, MongoDB, Firebase, SQLite, Docker, Postman API, Figma, GitHub, VS Code, Android Studio, Flask, FastAPI, RESTful APIs

Soft : Critical Thinking, Team Collaboration, Problem-Solving, Communication, Adaptability, Time Management

EDUCATION

BSc (Hons) In Information Technology Specializing In Software Engineering | SLIIT 2021 - 2025

EXPERIENCE

Trainee Full-Stack Developer | Ceylon Electricity Board (CEB) 2024 AUG - 2025 FEB

- Built and optimized RESTful APIs with Python (Flask, FastAPI) for the MDM & HES unified metering platform; delivered a SQL query generator and meter data retriever, plus an OAuth 2.0 authorization server with JWT and RBAC.
- Designed and maintained MySQL schemas (tables, constraints, indexes) and wrote parameterized SQL for CRUD, reporting, and batch operations; improved data accuracy and retrieval.
- Collaborated cross-functionally with engineers and analysts, implemented Agile (Scrum) practices, managed version control with Git, and produced detailed API documentation for seamless integration and maintenance

EDUCATION

- Career Essentials in GitHub Copilot Professional Certificate from GitHub and LinkedIn Learning
- Microsoft Azure AI Essentials Professional Certificate from Microsoft and LinkedIn Learning
- Microsoft Security Essentials Professional Certificate by Microsoft and LinkedIn
- Career Essentials in GitHub Professional Certificate from GitHub and LinkedIn Learning
- Microservices Foundations Professional Certificate by Kong
- Docker Foundations Professional Certificate from Docker and LinkedIn Learning

PROJECTS

AGELKA ERP

Stack: JavaScript, React, Express.js, MongoDB

Designed and developed Agelka's full-stack ERP system spanning inventory, sales, purchases, returns, GRNs, and stock adjustments, built on a multi-ledger architecture ensuring fully traceable, audit-safe quantity and financial flows with automated postings and integrity safeguards. Delivered a robust product catalog layer with strong validation and indexing, and built interactive React dashboards with real-time KPIs, branch filtering, pivots, and drill-down analytics. Implemented role-based access control, detailed audit logging, clean API architecture, and production-grade error handling, while improving UX across complex workflows such as Sales Returns, Item Movement Pivot, and Purchase Orders, including branded PDF outputs with metadata hashing.

RESTFUL-API-FOR-A-UNIVERSITY-TIMETABLE-MANAGEMENT-SYSTEM

Stack: JavaScript, React, Express.js, MongoDB

Built a secure, role-based MERN timetable system: Node.js/Express REST API with MongoDB (RBAC for Admin/Faculty/Student) and optional React views; implemented JWT auth, conflict-free room/resource booking, and enrollment workflows. Added request validation and robust error handling; time/room overlap detection eliminated scheduling conflicts.

SaleStream

Stack: .NET

Built the SaleStream backend in ASP.NET Core with MongoDB, implementing role-based access for Administrator, Vendor, and CSR users. Delivered vendor product CRUD with unique Product IDs and listing/category activation/deactivation; a full order lifecycle (create, status tracking from processing→delivery, update/cancel before dispatch); and an inventory service with live stock levels, automatic stock adjustments on product item changes, low-stock notifications to vendors, and safeguards preventing removal of items tied to pending orders. Added vendor management (admin-owned), customer rankings with stored averages, and comments that are immutable except for author edits, plus strong validation and error handling.

Harvesta---T.R.I

Stack: Python, React Native

[Final Year Research] Built Harvesta-TRI, a mobile-first (Android/iOS) vision system for greenhouse tomato maturity and harvest forecasting: used YOLOv8 to detect six ripeness stages from smartphone RGB images, then grouped results into Unripe/Half-ripe/Ripe percentages for actionable insight. Logged daily distributions to compute ripening velocity and calculate expected harvest dates via threshold-based linear trends with in app alerts. Added a rule-based module that provides environmental recommendations (temperature, humidity, light) tailored to the current ripeness profile. Delivered a phone-optimized dashboard for photo upload, live categorization, trend graphs, harvest timing, and guidance.

Hokka — Live Sri Lanka IT Job Search

Stack: Python, JavaScript, React

Built Hokka, a full-stack live job search tool that scrapes itpro.lk, jobseeker.lk, topjobs.lk and rooster.jobs concurrently using Python asyncio. Results stream progressively to a React frontend via Server-Sent Events — no database, no waiting for all sources to finish.
